

## **FOR IMMEDIATE RELEASE**

### **Custom Foam InSEALators to Provide a Quieter Birthing Center at Chandler Regional Hospital**

June 1, 2004 - Phoenix, AZ - Helping to implement the physical changes necessary to address complex environmental and health issues, a Phoenix-based company, Custom Foam InSEALators, will be installing an insulation system into the walls of the Birthing Center of Chandler Regional Hospital (CRH) in Chandler, Arizona. This will provide additional comfort to the birthing process, and control unwanted sounds from other rooms and hallways.

Icynene® is a spray-on application that expands to 100 times its initial volume to seal gaps and holes through which airborne sound penetrates the building. Since Icynene® minimizes airflow through walls, floors and ceilings, airborne sounds remain outside of the perimeter, creating a more comfortable environment for the patient. Whether it is a hospital or a home, Icynene® is designed to provide its occupants with a quiet comfort that has a positive impact on quality of life, productivity and peace-of-mind.

Chandler Regional Hospital (CRH) is a 210-bed hospital that serves the East Valley, one of the fastest growing areas in the entire country. The hospital is well known for the quality of its services—particularly its Family Birth Center—and for its community outreach. Chandler Regional Hospital is located at 475 South Dobson Road, in Chandler, Arizona. CRH is part of the Catholic Healthcare West family, with 41 hospitals, spans a service area that encompasses parts of Arizona, Nevada and most of California. It is the largest not-for-profit health care provider in California and the largest Catholic hospital system in the western part of the United States.

Icynene®, Icynene Inc., The Icynene Insulation System®, and Healthier, Quieter, More Energy Efficient™ are registered trademarks of Icynene Inc.
